Introduction to Lab #3: Lab_CubeStats_Old

José Nelson Amaral

CMPUT 229

University of Alberta

Requirements

- Follow all subroutine calling conventions
- Must use $fp to access anything that is stored in the stack
  - Only can use $sp in this assignment to change the size of the stack.

CubeStats

- Receives the following parameters:
  - corner: the address of the first element of a cube in an n-dimensional array.
  - edge: the size of the edge of the cube.
  - dimensions: the number of dimensions of the cube (and base array).
  - size: the size of the base array
    - Assume that the size of the base array is the same in all dimensions, *i.e.* the base array is itself a cube

CubeStats (cont.)

- $v0: a signed integer representing the floor of the average of all negative elements in the specified cube.

- $v1: a signed integer representing the floor of the average of all negative elements in the specified cube.

Computing the Floor of the Average

- For instance, for the negative numbers:

$$\$v1 = \left\lfloor \frac{1}{k} \sum_{i=0,\ c_i<0}^{k} c_i \right\rfloor$$

where c_i is an element of the Cube,
and k is the number of elements in the Cube.

CubeStats (cont.)

- Assume that the parameters are correct:
  - Parameters are positive
  - The Cube is contained within the base array

1-d Array Storage

What is the address of element -1 (i=2) ?

$$A + i \times 4$$

| ... | 7 | 3 | -1 | 1 | 4 | -5 | 15 | ... |

↑
A

A[i]

One-dimensional matrix A.

Address	Value
0x10001024	
0x10001020	
0x1000101C	...
0x10001018	15
0x10001014	-5
0x10001010	4
0x1000100C	1
0x10001008	-1
0x10001004	3
0x10001000	7
0x10000FFC	...

Organization of B in memory
in row-major style.

2-d Array Storage

What is the address of element w (i=1, j =2) ?

$$B + (i \times 3 + j) \times 4$$

Address	Value
0x10001024	
0x10001020	z
0x1000101C	y
0x10001018	x
0x10001014	w
0x10001010	v
0x1000100C	u
0x10001008	t
0x10001004	s
0x10001000	r
0x10000FFC	

j →		
r	s	t
u	v	w
x	y	z

i ↓

B[i][j]

Two-dimensional 3×3 matrix B.

Organization of B in memory in row-major style.

2-d Array Storage

Which elements belong to a Cube at position (1,1) with an edge = 2?

j →

r	s	t
u	v	w
x	y	z

i ↓

B[i][j]

Two-dimensional 3×3 matrix B.

Address	Value
0x10001024	
0x10001020	z
0x1000101C	y
0x10001018	x
0x10001014	w
0x10001010	v
0x1000100C	u
0x10001008	t
0x10001004	s
0x10001000	r
0x10000FFC	

Organization of B in memory in row-major style.

2-d Array Storage

Which elements belong to a Cube at position (1,1) with an edge = 2?

r	s	t
u	**v**	**w**
x	**y**	**z**

B[i][j]

Two-dimensional 3×3 matrix B.

| Address	Value
0x10001024	
0x10001020	**z**
0x1000101C	**y**
0x10001018	x
0x10001014	**w**
0x10001010	**v**
0x1000100C	u
0x10001008	t
0x10001004	s
0x10001000	r
0x10000FFC	

Organization of B in memory in row-major style.

3-d Array Storage

What is the address of element h (i=1, j =1, k=1) ?

$$C + (((i \times 2) + j) \times 2 + k) \times 4$$

$$C + (i \times 2 \times 2 + j \times 2 + k) \times 4$$

Address	Value
0x10001024	
0x10001020	
0x1000101C	h
0x10001018	g
0x10001014	f
0x10001010	e
0x1000100C	d
0x10001008	c
0x10001004	b
0x10001000	a
0x10000FFC	

C[i][j][k]

Three-dimensional 2×2×2 matrix C.

Organization of C in memory in row-major style.

main program

- reads a k-dimensional Cube from a file

- places the values in the memory in row-major format

- for each specification of a cube in the file:
  - initializes four global variables:
    - `totalNeg`, `totalPos`, `countNeg` and `countPos`
  - calls your `CubeStats` subroutine
  - prints the value returned by `CubeStats`

File format

size of array

dimension of array

$C[1][0][1] \leftrightarrow f$

3 2
a b
c d
e f
g h
1 0 1 1
0 0 0 2
-1

i

a   b

c   d

k

C[i][j][k]

a   b

c   d

e   f

g   h

Cube a position (0,0,0) with edge 2
Cube a position (1,0,1) with edge 1

main

- Reading and understanding the main routine is part of the assignment.

Test Generator

- A test generator, written in Python, is provided to you as a convenience.
  - Have fun modifying/playing with it.
- Caution:
  - Large test cases overflow the arena provided
  - Increasing the arena is ok but will eventually run into the static space limit of SPIM.

What to hand in

- A single file named CubeStats.s containing your subroutine CubeStats written in MIPS assembly.
